

IN THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application. An identifier indicating the status of each claim is provided.

Listing of Claims

1. (Currently Amended) A communication service method comprising the steps of:
connecting a plurality of communication terminal apparatus with each other;
~~transmitting means for~~ transmitting audio signals and image signals between said plurality of communication terminal apparatus via a transmitting means;
superposing a first image signal transmitted from an arbitrary one of said plurality of communication terminal apparatus utilized by a first user with a second image signal of ~~arbitrary selling goods~~ one or more products to generate a third image signal, said second image being ~~offered directly~~ promoted by the arbitrary communication terminal apparatus utilized by said first user to the arbitrary communication terminal apparatus utilized by a second user; and
delivering the third image signal to said communication terminal apparatus of said second user;
wherein compensation is given to said first user of said one of said plurality of communication terminal apparatus that delivered said third image signal, said compensation is based on a predetermined condition concerning the delivery of said third image signal of the one or more products.

2. (Currently Amended) The communication service method according to claim 1, wherein
said ~~selling goods~~ one or more products are selected by said first user of said one of said
plurality of communication terminal apparatus.
3. (Previously Presented) The communication service method according to claim 2, wherein
said first image signal that was received from one of said plurality of said arbitrary
communication terminal apparatus includes an image from said first user of said one of said
plurality of communication terminal apparatus.
4. (Original) The communication service method according to claim 1, wherein
said first image signal includes a real-time moving image signal.
5. (Currently Amended) The communication service method according to claim 1, wherein
more detailed information of said ~~selling goods is~~ one or more products are supplied to
said plurality of communication terminal apparatus in response to a demand from said one of
said plurality of communication terminal apparatus.
6. (Currently Amended) The communication service method according to claim 5, wherein
an environment for performing transactions of said ~~selling goods is~~ one or more products
are proposed to said one of said plurality of communication terminal apparatus to which said
more detailed information is supplied.

7. (Currently Amended) The communication service method according to claim 1, wherein
said first image signal from said one of said plurality of communication terminal
apparatus is superposed with said second image signal of the ~~selling goods~~ one or more products
so that the second image signal has a relation with an object included in said first image signal.
8. (Currently Amended) The communication service method according to claim 3, wherein
said first image signal that was received from said one of said plurality of communication
terminal apparatus is superposed with said second image signal of the ~~selling goods~~ one or more
products so that said third image signal includes an image in which said first user of said
communication terminal apparatus is superposed on the ~~selling goods~~ one or more products, uses
the ~~selling goods~~ one or more products or holds the ~~selling goods is~~ one or more products
generated.
9. (Canceled)
10. (Currently Amended) The communication service method according to ~~claim 9~~ claim 1,
wherein
said consideration is determined based on a number of times of the delivery of said third
image signal of the ~~selling goods~~ one or more products, a period of time of the delivery, or a
predetermined condition for processing concerning the ~~selling goods~~ one or more products
performed by said first user.

11. (Previously Presented) The communication service method according to ~~claim 9~~ claim 1, wherein

said consideration is paid by money, by countervailing of the consideration with a utility rate of the communication service, or by countervailing of the consideration with money to be paid at a time of prescribed ~~selling goods~~ one or more product transactions.

12. (Currently Amended) The communication service method according to claim 2, wherein said third image signal including an image of said ~~selling goods~~ is one or more products selectively delivered to said one of said plurality of communication terminal apparatus depending on the first and second user thereof.

13. (Currently Amended) The communication service method according to claim 1, wherein said ~~selling goods~~ one or more products included in said third image signal are changed in sequence at every series of the connection, at every predetermined period of time, in response to a demand from said one of said plurality of communication terminal apparatus utilized by said first user that generates said first image signal, or in response to a demand from said one of said plurality of communication terminal apparatus utilized by said second user.

14. (Currently Amended) A communication service apparatus comprising:

connecting means for connecting a plurality of communication terminal apparatus with each other;

first transmitting means for transmitting audio data and image data between said plurality

of communication terminal apparatus;

receiving means for receiving a first image data that was received from one of said plurality of connected communication terminal apparatus utilized by a first user;

image data superposing means for superposing said first image data with a second image data of ~~arbitrary selling goods~~ one or more products to generate a third image data, said second image being ~~offered directly~~ promoted by the arbitrary communication terminal apparatus utilized by said first user to the arbitrary communication terminal apparatus utilized by a second user; and

second transmitting means for transmitting said third image data to another of said plurality of connected communication terminal apparatus utilized by said second user;

wherein compensation is given to said first user of said one of said plurality of communication terminal apparatus that delivered said third image signal, said compensation is based on a predetermined condition concerning the delivery of said third image signal of the one or more products.

15. (Previously Presented) The communication service apparatus according to claim 14, said apparatus further comprising:

first recording means for recording said second image data selected beforehand by each user of said one of said plurality of communication terminal apparatus, in which said second image data being superposed with said first image data from said one of said plurality of communication terminal apparatus, wherein

said image data superposing means generates said third image data by superposing selected said second image data recorded in said first recording means with said first image data.

16. (Currently Amended) The communication service apparatus according to claim 15, said apparatus further comprising:

second recording means for recording information including said second image data of said ~~selling goods~~ one or more products to be advertised, wherein

said image data superposing means generates said third image data by superposing selected said second image data of said ~~selling goods~~ one or more products recorded in said second recording means with said first image data.

17. (Previously Presented) The communication service apparatus according to claim 14, wherein

said connecting means connects said plurality of communication terminal apparatus in a state in which it is possible to transmit real-time moving image data among said plurality of communication terminal apparatus.

18. (Currently Amended) The communication service method according to claim 14, wherein

said second image signal from said plurality of communication terminal apparatus includes an image of said first user of said plurality of communication terminal apparatus; and

said image data superposing means superposes said first image data with said second image data so that said third image data includes an image superposed on the ~~selling goods~~ one or more products.

19. (Currently Amended) The communication service apparatus according to claim 14,
wherein

said ~~selling goods~~ one or more products included in said third image data are changed in sequence at every series of the ~~connection~~ connecting means, at every predetermined period of time, in response to a demand from said plurality of communication terminal apparatus utilized by said first user that generates said first image data, or in response to a demand from said plurality of communication terminal apparatus utilized by a second user.

20. (Previously Presented) The communication service apparatus according to claim 16,
further comprising:

third recording means for recording predetermined data concerning actual results of superposing processing of said first image data with said second image data at every user of said plurality of communication terminal apparatus; and

adjusting means for paying consideration to each user based on contents recorded in said third recording means.

21. (Currently Amended) The communication service apparatus according to claim 20,
further comprising:

fourth recording means for recording data for a hobby and a preference of said first or second user using said plurality of communication terminal apparatus to be delivered as said third image data, wherein

said image data superposing means generates said third image data by selecting said

image data of said ~~selling goods~~ one or more products based on contents recorded in said fourth recording means.

22. (Currently Amended) The communication service apparatus according to ~~claim 1~~
claim 14, wherein

said first transmitting means further transmits information of more detailed information of said ~~selling goods~~ one or more products or a connecting destination of a system which proposes an environment for performing transactions of said ~~selling goods~~ one or more products to said one of said plurality of communication terminal apparatus that transmitted the superposed image signal.

23-34. (Canceled)
